This protein is one of two distantly related receptors
TNF-alpha (cachectin) and TNF-beta (lymphotoxin).
                                                                                             ##status

This protein is one of two known receptors for both TNF-alpha
(cachectin) and TNF-beta (lymphotoxin).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A94552; B92181; A92141; I58200;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-Sep-1997
                                          restriction endonuclease evidence indicates that a single gene codes for the alpha chain common to the four dimeric hormones: thyrotropin, lutropin, follitropin, and choriogonadotropin previously the mature alpha chain (residues 25-116) was isolated from each of the hormones and its sequence was determined, as documented below
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              #domain intracellular #status predicted #label INT\ #binding_site carbohydrate (Asn) (covalent) #status

Description: (1-285) from US08804166.pep

Perfect Score: 2183

Sequence: 1 SRTSLLLAFGLLCLPWLQEG......GFKVENHTACHCSTCYYHKS 285

Scoring table: PAM 150
Gap 11

Searched: 69112 seqs, 25083644 residues
Post-processing: Minimum Match 0%

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swiss1

Statistics: Mean 42.622; Variance 62.749; scale 0.679

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CI -!- FUNCTION: RECEPTOR FOR THE ACTIVATED RECEPTOR. THE RESULTING COMPLEX (DISC)

CC RECRUITS CASCASE-B TO THE DETIVATED RECEPTOR. THE RESULTING COMPLEX (DISC)

CC RECRUITS CASCASE-B PROTECLYTIC ACTIVATION WHICH INITIATES THE CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APPOTOSIS (BY SIMILARITY).

CC PROTEASES) MEDIATING APPOTOSIS (BY SIMILARITY).

CC PROTEINS THE FINDING TO THE EXTRACELLULAR DOMAIN OF THEIL LEADS TO HOWOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS COMPLEX HOUSE THAT INTERACTS SPECIFICALLY COMPLEX BY THEIR ASSOCIATION WITH THE RECEPTORS DEATH DOMAIN OF TRADD. VARIOUS TRADD. ARE RECRUITED TO THEIR THE COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX BY SIGNALING (BY SIMILARITY: CONTAINS A LA-NGER/THER-TYPE CYSTEINE-RECRUITED TO SUBSCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.

CC INFERENCE OF CONTAINS A LA-NGER/THER-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

MOL. HIMONOL. RECEPTOR FOR THE ALPHA. THE ADAPTOR MOLECULE FADD

CC -!- FUNCTION: RECEPTOR FOR THE ACTIVATED RECEPTOR. THE RESULTING

CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)

CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)

CC PROTEASES, MEDIATING APOPTOSIS (ASPARTATE-SPECIFIC CYSTEINE

CC PROTEASES, MEDIATING APOPTOSIS (BY SIMILARITY).

CC -!- SUBUNIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF THEIL LEADS TO

CC COMMONOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS

CC PROVIDE A NOVEL MOLECULAR INTERPACE THAT INTERACTS SPECIFICALLY

CC PROTEINS SUCH AS TRAPS, RIP AND POSSIBLY FADD, ARE RECRUITED TO

CC THERI COMPLEX BY THEIR ASSOCIATION WITH THE COMPLEX

CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND

CC I- SUBCCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.

CC -!- SUBCCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.

DNA CELL BIOL. 9:705-715(1990).

-i- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
REGRECATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).

-i- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFAI LEADS TO
HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTING
PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FAND, ARE RECRUITED TO
TOFIN COMPLEX BY THEIR ASSOCIATION WITH TRADD, THIS COMPLEX
ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
HIT-TRADDS TO STORMATING OF STRADE THAT APOPTOSIS AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE

Statistics: Mean 41.694; Variance 64.494; scale 0.646

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
